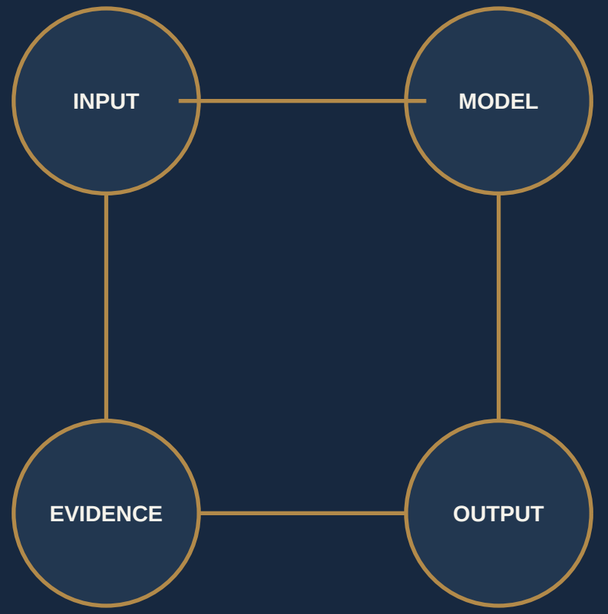
BACHELOR OF ARTIFICIAL INTELLIGENCE & ROBOTICS ENGINEERING

PROJECT (Capstone)

AI.450 | University lecture series



What you will learn

A practical progression from core ideas to engineering judgment

- Explain and define create a comprehensive 100.
- Apply key methods including cover: identifying a real-world problem.
- Build or analyze a practical system involving literature review.
- Evaluate assumptions, limitations, performance and responsible use.

A connected learning journey

Each stage prepares the tools needed for the next.

01

FOUNDATIONS

Create a comprehensive 100

02

METHODS

Cover: identifying a real-world problem

03

SYSTEMS

Literature review

04

PRACTICE

Laboratory, evaluation and project

The subject at a glance

A map of the ideas and techniques in this course

01 · Create a comprehensive 100

Create a comprehensive 100

02 · Cover: identifying a real-worl

Cover: identifying a real-world problem

03 · Literature review

Literature review

04 · Problem definition

Problem definition

05 · Requirements engineering

Requirements engineering

06 · Research methodology

Research methodology

07 · System architecture

System architecture

08 · AI model selection

AI model selection

Core ideas, made explicit

AI.450 • Distinguish definitions, assumptions and evidence

- Create a comprehensive 100
- Cover: identifying a real-world problem
- Literature review
- Problem definition
- Requirements engineering

DEFINE → MODEL → TEST → INTERPRET

Core ideas, made explicit

AI.450 • Distinguish definitions, assumptions and evidence

- Research methodology
- System architecture
- AI model selection
- Robotics architecture
- Hardware selection

DEFINE → MODEL → TEST → INTERPRET

Follow the system through its stages

Use the process diagram to connect components and outcomes.

Teaching sequence: reveal one component at a time; then replay the complete end-to-end flow.

From concept to a real engineering decision

A short case study for discussion and worked-example narration

SCENARIO

A real task involving create a comprehensive 100.

CONSTRAINTS

Data, resources, safety and operating conditions shape the design.

DECISION

Select a method; justify the trade-offs and define success.

- State assumptions before calculating or implementing.
- Compare the expected result with observed evidence.

Laboratory · build, measure, improve

Students work through the following guided sequence.

- Specify a measurable task using create a comprehensive 100.
- Implement or simulate a baseline using cover: identifying a real-world problem.
- Run a controlled test and record results with units and conditions.
- Diagnose a failure, revise the design and explain the improvement.

Review · explain · apply

KNOWLEDGE CHECK

What assumptions does the method make? What evidence would show that it works?

PRACTICAL CHALLENGE

Apply one course idea to a new context; state constraints, test criteria and likely failure modes.

Key takeaway: make the model visible, test it, and communicate its limits.

Course-series slide design • detailed narration, demonstrations and assessments expand each module.
